

PC Event Log

The PC Event log displays recent MAT activities and events generated on the PC. The PC Event log displays active events in a way that lets you quickly view the most important events.

Using the PC Event window

Once you open the PC Event window, you can perform the following tasks:

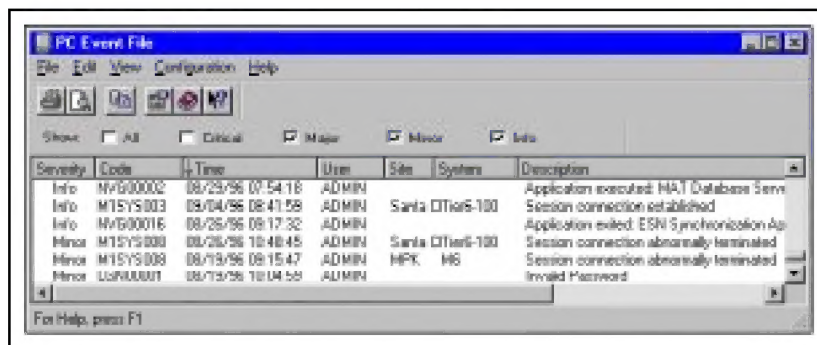

- Locate an alarm in the Event file to identify the cause of the problem
- Learn more detail about an alarm

Launching and using the PC Event window

From the **Maintenance** menu of the Navigator window, select **PC Events**.

The PC Event window provides a list of events and a menu bar from which you can learn more about the events.

PC Event window

Filter toolbar checkboxes

Use the Filter toolbar to select the types of events that you wish to display in the list. Figure 61 shows the Filter toolbar. Click to check (or uncheck) an item. For example, you would check “Critical” to restrict the list to events that are critical. The Filter Toolbar may be dragged to the top or bottom of the window.
